Dr. Kirti Chaudhry

Executive Committee

Dr. Yogesh Mittal

Dr. Prerna Thareja

Dr. Aditi Mishra

Dr. Ghanshyam Jangid

Reception

Dr. Radhika Rastogi

Dr. Rajni Bishnoi

Conventional implant treatment cannot be performed in the edentulous maxilla with large sinuses due to inadequate amount of bone for anchorage of the implants. For over three decades bone grafting prior to or simultaneously with implant placement has become routine in oral rehabilitation. Various bone-augmentation techniques such as sinus floor augmentation and onlay bone grafting have been described with the common goal of increasing the volume of load-bearing bone. However results may not be guaranteed and treatment duration may also increase. Angulated implants like 'All on 4' and zygomatic implants provide a single stage unique alternative for fixed immediate loading prosthesis in edentulous maxilla. Zygomatic implants provide an additional benefit of avoidance of any cantilevers and a sturdy posterior anchorage.
